

Native Wetland Plants of Champaign County

Coefficient of Wetness (CW)

Coefficient of Wetness values range from -5 (very wet/inundated) to 5 (very dry/xeric).

Wetness Categories:

Obligate Wetland (OBL). Almost always occurs in wetlands (estimated probability > 99%) under natural conditions

Facultative Wetland (FACW). Usually occurs in wetlands (estimated probability 67% - 99%), but occasionally found in non-wetlands.

Facultative (FAC). Equally likely to occur in wetlands (estimated probability 34% - 66%) or non-wetlands.

A positive (+) and negative (-) sign is used for the facultative categories. The (+) sign indicates a frequency towards the wetter end of the category (more frequently found in wetlands) and the (-) sign indicates a frequency towards the drier end of the category (less frequently found in wetlands).

Coefficient of Conservatism (CO)

Coefficient of Conservatism values range from 0 to 10.

Plant species with a CC value of 0 are considered "weedy" species.

Plant species with a CC value of 10 are considered "conservative" species.

Physioanomy

P = perennial

A = annual
