

The Top Three Reasons Everyone Should Vermicompost

(<http://www.redwiggler.110mb.com/index.php?p=why>)

- 1. By Vermicomposting, you can reduce the amount of garbage you send to the landfill.**
- 2. Worms produce beautiful black compost called "castings". It's a nitrogen-rich fertilizer, it's organic, and it's one of the best soil additives on the planet.**
- 3. We all need to work together to make the environment healthier, and vermicomposting deals with our waste in a clean and healthy way. And, once you have your worm composter up and running, it's free forever. In fact, you may produce enough worms to share with your friends and family to help them reduce their waste too!**

Definition: Vermicomposting is the process of having redworms and other decomposer organisms process our organic waste and turn it into a great natural fertilizer.
